ALKON CORPORATION ANNOUNCES EXPANDED ALLENAIR STAINLESS STEEL CYLINDER PORTFOLIO

Customizable designs engineered to meet exact application and compliance needs.

Fremont, OH — Alkon Corporation is proud to announce that its Allenair brand now offers fully customizable stainless steel cylinder solutions, designed to meet the most demanding hygienic and industrial applications.

In a market where stainless steel cylinders are often standardized imports, Allenair sets itself apart with fully customizable solutions built domestically. By offering flexible designs engineered and manufactured in Fremont, OH, Allenair provides OEMs and end-users a distinct advantage in reliability, compliance, and lead time.

“Our customers don’t want off-the-shelf compromises—they want cylinders designed to fit their application exactly,” said Rich Yori, president at Alkon Corporation. “By keeping engineering and manufacturing here in the U.S., we can deliver precision, customization, and responsiveness that global imports simply can’t match.”

Allenair’s stainless portfolio includes:

- **Stainless Cylinders** – clean in place designs tailored for regulated industries.
- **Dripless Valve-in-Head® Cylinders** – engineered for sanitary dispensing and CIP environments.
- **Hygienic Guillotine Valve-in-Head® Cylinders** – built for precise, high-speed actuation in food processing and packaging.

The Valve-in-Head® design maximizes cycle speed while minimizing compressed air consumption, supporting energy efficiency and cost savings in operation.

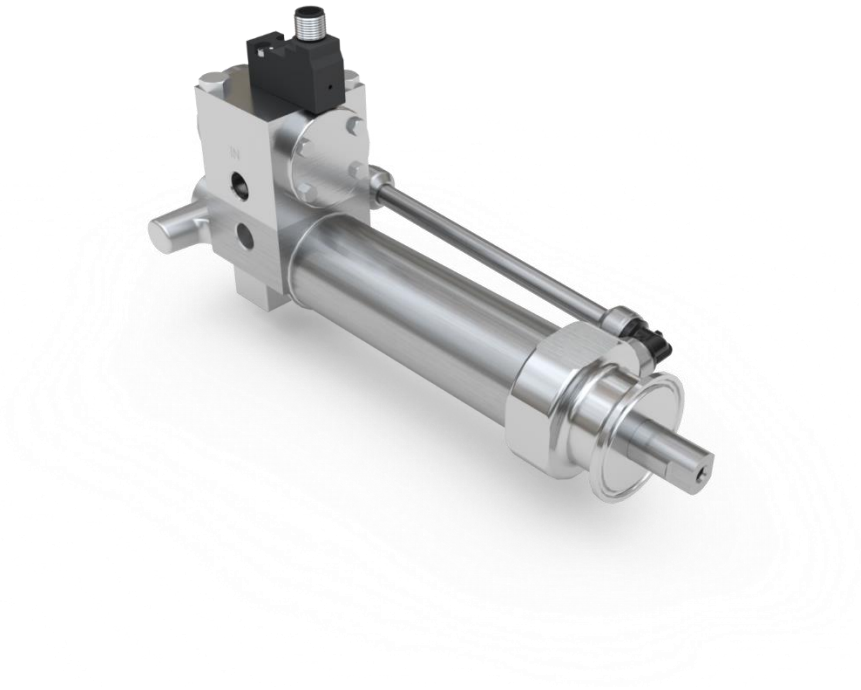

In addition to these core offerings, Allenair stainless steel cylinders can be customized across multiple design elements to meet exact application needs. Customers can specify bore size, stroke length, rod size, and end-of-rod features, while also choosing Valve-in-Head® capability where integration is required.

All stainless Allenair cylinders can be custom-engineered to meet unique performance requirements, compliance regulations, and operating environments. From food and beverage processing to pharmaceutical and other sanitary markets, Allenair offers solutions that ensure safety, reliability, and simplified integration.

About Alkon Corporation

Headquartered in Fremont, Ohio, Alkon Corporation has been a trusted leader in fluid power solutions for over 70 years. The company offers precision-engineered fittings, high-performance valves, and pneumatic and hydraulic cylinders through its family of brands, including Allenair, Star Hydraulics, and AIRman Products. With U.S. engineering, ISO-certified facilities, and vertically integrated manufacturing, Alkon delivers Trusted Performance to OEMs, distributors, and end-users across industries worldwide.
